

TIME

When Smart Money Moves

DOJO GAINS - Core Pillar 2

Why Time Matters

- Markets are not active 24/7 - there are windows of opportunity
- Institutions trade during specific hours (Killzones)
- Volume and volatility peak during certain times
- Wrong time = low probability setups, fakeouts, chop
- Right time = clean moves, follow-through, real setups

Time is the invisible edge most traders ignore

The Four Killzones

ASIAN SESSION

7:00 PM - 12:00 AM ET

Range building, liquidity setup

NY AM SESSION

8:30 AM - 11:00 AM ET

Highest volume, strongest moves

LONDON SESSION

2:00 AM - 5:00 AM ET

First major move

NY PM SESSION

1:00 PM - 4:00 PM ET

Continuation or reversal

All times in New York (Eastern) Time

Asian Session (7 PM - 12

- Generally the LOWEST volatility session
- Price often consolidates and builds a range
- Creates liquidity above and below the range
- Sets up the 'Asian High' and 'Asian Low'
- Smart money accumulates positions quietly
- Best use: Mark the range, prepare for London

London Killzone (2 AM - 5

- First major liquidity injection of the day
- Often sweeps Asian session high OR low
- Sets the direction for the day (London = True Move)
- High probability setups form here
- Best for: EUR, GBP pairs, indices
- Watch for manipulation then reversal

New York AM (8:30 AM - 11

- HIGHEST volume session - most opportunities
- US economic data releases (8:30 AM)
- Often continues London's move OR reverses it
- Watch for NY Open manipulation (9:30 AM)
- Best session for US stocks, indices, USD pairs
- Power Hour: 9:30 - 10:30 AM

This is where the money is made

New York PM (1 PM - 4 PM)

- Volume decreases after lunch (11 AM - 1 PM is dead)
- Often sees reversals or trend continuation
- Last hour (3-4 PM) can have strong moves
- Institutions closing positions
- Good for: Swing trade entries, position adjustments
- Avoid: 11 AM - 1 PM (lunch = chop)

Finish strong or step aside

Time-Based Trading

- 1. Mark the Asian range (high and low)
- 2. At London open, watch for sweep of Asian H/L
- 3. Enter after sweep + confirmation
- 4. If no setup in London, wait for NY AM
- 5. Avoid trading outside Killzones
- 6. Close or manage by NY lunch

Patience during off-hours = profits during Killzones

Key Takeaways

- Asian = Range building (mark H/L)
- London = First real move (2-5 AM ET)
- NY AM = Highest volume (8:30-11 AM ET)
- NY PM = Continuation/reversal (1-4 PM ET)
- Avoid: Asian (unless ranging) and NY Lunch
- Best setups happen IN the Killzones

Trade the right time, not all the time
