

INTRODUCTION TO **MY TRADING STRATEGY**

DOJO GAINS

Putting the Core Pillars Together

The Three Core Pillars

1. LIQUIDITY

Where is the money? Where are stops resting?

2. TIME

When do institutions move? Trade the Killzones.

3. IMBALANCES

Where did price move too fast? FVGs are entry zones.

Combine all three = High probability trades

Strategy Overview

- Wait for a KILLZONE (London or NY AM)
- Identify where LIQUIDITY is resting (BSL/SSL)
- Watch for a SWEEP of that liquidity
- Look for IMBALANCE (FVG) after the sweep
- Enter at the FVG with defined risk
- Target the opposite liquidity pool

Step 1: Mark Key Levels

- Draw previous day high (PDH) and low (PDL)
- Mark Asian session high and low
- Identify swing highs and swing lows
- Note equal highs/lows (liquidity magnets)
- Mark any unfilled FVGs from previous sessions
- These are your targets and entry zones

Preparation happens BEFORE the Killzone

Step 2: Wait for Killzone

- Do NOT trade during Asian (unless ranging)
- LONDON KILLZONE: 2:00 AM - 5:00 AM ET
- NY AM KILLZONE: 8:30 AM - 11:00 AM ET
- Watch for manipulation at session opens
- Be patient - the setup will come
- No setup in Killzone = No trade

Step 3: Wait for Liquidity

- Watch for price to take out a key level
- Sweep of Asian high/low is common at London open
- Look for wicks above/below the level
- The sweep triggers retail stops
- Smart money gets filled during the sweep
- After the sweep, prepare for reversal

The sweep is your signal

Step 4: Enter at the FVG

- After the sweep, look for displacement
- Mark the Fair Value Gap that forms
- Wait for price to retrace to the FVG
- Enter at 50% of the FVG (equilibrium)
- Stop loss: Beyond the FVG
- Confirmation: Rejection candle at FVG

FVG = Your entry zone

Step 5: Target & Manage

- Target: Opposite liquidity pool (BSL/SSL)
- Take partials at 50% and equilibrium points
- Move stop to breakeven after first target
- Trail stop as price moves in your favor
- Exit or manage by NY lunch (11 AM)
- Risk:Reward minimum 1:2 (ideally 1:3+)

Plan your exit before you enter

Example Trade Setup

- Asian session creates a range (mark H/L)
- London opens at 2 AM, sweeps Asian LOW
- Strong bullish candle creates FVG
- Price retraces to FVG - ENTER LONG
- Stop below FVG, target Asian HIGH / PDH
- Price hits target - take profits

Key Trading Rules

- ONLY trade during Killzones
- WAIT for liquidity sweep before entering
- ENTER at FVG with confirmation
- RISK max 1-2% per trade
- TARGET the opposite liquidity
- NO revenge trading - one good trade per day is enough

Discipline over everything

Strategy Summary

LIQUIDITY tells you WHERE price will go

TIME tells you WHEN to look for setups

IMBALANCES tell you WHERE to enter

The Strategy:

Mark levels > Wait for Killzone > Watch for sweep >
Enter at FVG > Target opposite liquidity
