

BUILDING A

TRADING PLAYBOOK

DOJO GAINS - Mentorship

Your Personal Trading System

What is a Trading

- A documented set of YOUR proven setups
- Clear rules for entry, exit, and management
- Based on YOUR backtesting and experience
- Removes emotion from trading decisions
- Your 'game plan' for every market scenario
- Evolves as you learn and grow

No playbook = No consistency

Why You Need a Playbook

- Eliminates guessing and FOMO trading
- Creates consistency in your approach
- Makes journaling and review easier
- Identifies what actually works for YOU
- Prevents strategy hopping
- Professional traders all have one

Playbook Components

- 1. Setup Name (e.g., 'London Sweep Reversal')
- 2. Market Conditions (trend, range, volatility)
- 3. Entry Criteria (specific rules)
- 4. Exit Criteria (stop loss, targets)
- 5. Time of Day (when this setup works)
- 6. Risk Parameters (position size, R:R)
- 7. Screenshots of Example Trades

Creating Your Setups

- Start with 2-3 setups MAXIMUM
- Each setup should have clear, repeatable rules
- Backtest each setup (minimum 50 trades)
- Forward test in demo before going live
- Document win rate, avg R:R, best times
- Only add new setups when current ones mastered

Master few, not many

Example: London Sweep

- Name: London Sweep Reversal
- Time: 2:00 AM - 5:00 AM ET
- Condition: Price sweeps Asian H or L
- Entry: At FVG or OB after sweep, with BOS
- Stop: Beyond sweep wick
- Target: Opposite liquidity (Asian L if swept H)
- R:R: Minimum 1:2

This is a complete setup

Pre-Trade Checklist

- Is this a setup from my playbook?
- Am I trading during the right time?
- Is the higher timeframe trend aligned?
- Do I have clear entry and stop levels?
- Is R:R at least 1:2?
- Is my position size correct (1-2% risk)?
- Am I emotionally ready to take this trade?

All YES = Take the trade

Tracking & Review Process

- Journal EVERY trade (win or loss)
- Screenshot entry, management, exit
- Note: What setup? Did you follow rules?
- Weekly review: What worked? What didn't?
- Monthly: Calculate stats per setup
- Quarterly: Update playbook based on data

Building Your Playbook:

- 1. Choose 2-3 concepts you understand well
- 2. Define clear rules for each setup
- 3. Backtest on historical charts (50+ trades)
- 4. Document everything in your playbook
- 5. Forward test in demo for 2-4 weeks
- 6. Go live with small size, track results
- 7. Review monthly, refine, repeat

Key Takeaways

- A playbook = Your documented trading system
- Start with 2-3 setups, master before adding
- Every setup needs clear rules
- Use a checklist before every trade
- Journal and review religiously
- Your playbook evolves with you

Your playbook is your edge
