

INTRO TO CHARTING

Reading the Market's Language

DOJO GAINS - Mentorship

What is a Chart?

- Visual representation of price over time
- Shows the battle between buyers and sellers
- Each candle/bar = price action for a time period
- Charts reveal patterns that repeat
- The foundation of technical analysis
- Your window into market psychology

Chart Types

CANDLESTICK

Most popular, shows OHLC
Best for price action trading

BAR CHART

Similar to candle, different visual
Used by some futures traders

LINE CHART

Only shows close prices
Good for seeing trends simply

HEIKIN ASHI

Smoothed candles
Good for trend identification

We use candlestick charts

Understanding Timeframes

- Each candle = one period of time
- 1 minute chart: 1 candle = 1 minute
- Daily chart: 1 candle = 1 full day
- Higher TF = less noise, more reliable
- Lower TF = more detail, more noise

Day Trading: 1m, 5m, 15m

Swing Trading: 1H, 4H, Daily

Position Trading: Daily, Weekly

Multi-Timeframe Analysis

- Always check higher timeframe first
- HTF = Direction and key levels
- LTF = Entry timing and precision
- Example: Daily for trend, 15m for entry
- Don't fight the higher timeframe trend
- Alignment across timeframes = higher probability

Top-down analysis is key

Essential Chart Elements

- PRICE: The candles/bars (most important)
- VOLUME: Confirms price moves
- SUPPORT/RESISTANCE: Key levels
- TREND: Direction of the market
- PATTERNS: Repeating formations
- Keep charts clean - less is more

Price is king, everything else supports it

Setting Up Your Charts

- Use dark background (easier on eyes)
- Green candles = bullish, Red = bearish
- Mark key levels (S/R, highs, lows)
- Add 1-2 key indicators max
- Save templates for different strategies
- Keep it simple and clean

Key Takeaways

- Charts show price over time
- Candlestick charts are standard
- Higher timeframes = more reliable
- Always use multi-timeframe analysis
- Keep charts clean and simple
- Price is the primary focus

The chart tells you everything you need to know
